

Questions & Answers

#1

1. I am writing to submit a clarification request regarding the referenced RFB for generator servicing. To support accurate and consistent pricing across all responding vendors, would the County be able to provide a list of the generators & ATS / switch gear included within the three-year scope of work? If available, the following information would be helpful:

- Make and model
- Generator / ATS size-rating
- Fuel type (diesel, natural gas, propane, gasoline, etc.)
- Current run hours
- Mobile or permanent / stationary

Answer: Please see the attached list of HCSO generators.

The list of generators provided with the solicitation reflects the Hillsborough County Sheriff's Office's current known inventory at the time of bid issuance. However, this inventory may change during the term of the contract, and additional generators or different generator brands may be added or replaced as operational needs require.

Bidders are advised that pricing should not be contingent upon specific generator brands. Pricing is expected to be structured based on generator capacity (kilowatt size), as the intent of this solicitation is to allow flexibility for servicing generators of varying manufacturers provided they meet the required specifications.

Accordingly, bidders should submit pricing by kW size category rather than by brand to ensure consistency and applicability throughout the contract term.

2. For planning and response-time considerations, could the County advise whether generator locations are geographically concentrated or if certain sites are located more than approximately 25 miles apart, or alternatively provide a general reference point for distance calculations?

Answer: All HCSO generator sites are within 18 miles of the centrally located Sheriff's Operations Center (SOC) with two exceptions. The generators located at the Walter C. Heinrich Practical Training Site (WCHPTS) in Lithia, is approximately 30 miles from the SOC. The generator located at District IV is approximately 25 miles from the SOC.

- 3. In order to provide the most accurate (and thus lowest possible) bid possible for this job, it would greatly assist our estimating efforts if we could obtain a list of the generators within this project scope.?**

Answer: Please see Question #1 for this information.

		Generator Information		ATS Information		Fuel Information	
HCSO Site	Mobile/ Permanent	Model	kW	Model	Total (gal)	Fuel Type (Diesel, Propane)
